Readme and Instructions

Provided with the submission is C++ code, all instance files and a makefile.

The makefile can be used to compile and run the program.

- **To compile the code, navigate to the downloaded folder through a terminal.**
- Run the command **make** to compile the program (Main.cpp).
- Run the command **make run** to run the program.

Alternatively, use **make && make run** for a one-line compile and run after navigating to the submission folder through a terminal.
